

Dear Customers,

Ecotech Engineering has introduced a quarterly company newsletter to bring the latest news and products to our valued customers.

Firstly, Ecotech Engineering is excited to announce that we have undergone a management change with the addition of Marc Matthews as a director. Marc has spent the last 6 years in Saudi Arabia involved in the Oil & Gas industry. He brings international engineering knowledge and experience to the company and is looking forward to meeting all our respected clients.

Recently completed projects

Ecotech Energy, one of our divisions, recently completed and commissioned a long term vegetable storage facility for an esteemed client in Mozambique. The plant boasts precision climate monitoring and control for vegetable storage, ensuring the product is maintained at store quality for long durations. Advanced electronic control systems were introduced to maintain the environment within the storage facility, with great success.

Ecotech Hydro, one of our divisions, installed and commissioned a water treatment plant for a valued client in the Western Cape.

The plant boasts facilities for purifying high TDS borehole water for use in everyday laboratory processes. The 2000 lph RO plant allows the laboratory to operate completely independently from the local Municipal water supply. Further client benefits with this type of system is that it was built into a standard 6 meter container, so transport to site was fast and installation time was minimal. All systems are wet tested at our factory and the FAT is signed off by the client before the system is transported to site.

Current ongoing projects

Under both divisions, Ecotech Engineering is currently involved in a myriad of projects ranging from large residential power and water treatment projects to commercial marine and industrial energy and water solutions.

Company presence

Ecotech Engineering has spent considerable time in creating a much improved online presence, focusing on social media. Newly created Facebook, Instagram and LinkedIn business profiles now boast news, current, past projects, product updates and promotions. We encourage all our clients to like and subscribe to their preferred Ecotech Engineering social media platform, to keep up-to-date. Furthermore, Ecotech is running an array of Facebook advertising campaigns, which should be regularly seen by all.

Closing thoughts

We at Ecotech Engineering strive for excellence in whatever we do, from precision engineered solutions to family-like relationships with our clients. Client relations are of the utmost importance, ensuring long standing and trusted partnerships for decades to come.

Ecotech Engineering thanks everyone for the ongoing business and we look forward to continuous service to all.
